Expert's Advice

How It Works

Paracetamol functions as an analgesic (pain reliever) and antipyretic (fever reducer) by blocking specific chemical messengers responsible for causing pain and fever.

Frequently Asked Questions

Q. What if I vomit after taking Paracetamol?

If vomiting occurs within 30 minutes of a dose, retake the same dose. If it happens after 30 minutes, wait until the next scheduled dose.

Q. When will I feel better after taking Paracetamol?

Effects are usually felt within 30 minutes.

Q. How often can I take Paracetamol?

Limit to four doses within 24 hours, with a minimum of 4 hours between doses. Avoid taking it for more than 3 days without consulting a doctor.

Q. Does Paracetamol make babies sleepy?

No, Paracetamol does not induce sleep; it mainly reduces pain and fever in children.

Q. Is Paracetamol safe for children?

Yes, it is safe for children when used according to the doctor's instructions.

Q. Is Paracetamol an antibiotic?
